AlphaGuardian™

OPERATIONAL TECHNOLOGY SECURITY MADE SIMPLE

AlphaGuardian Networks is a pioneering leader in securing SCADA, Building Automation Systems (BAS) and Industrial Control Systems (ICS) from cyberattacks. These Operational Technology (OT) systems are the backbone of your operations and an interruption to any of these can have devastating consequences.

The rapid rise in OT cyberattacks, including ransomware, makes protecting these systems a critical task. Until now, OT cybersecurity has been too expensive, too complex and frankly, too confusing. We created Site Radar to change that.

Site Radar lets you see all threats to your OT network using an easy-to-understand web interface. Site Radar gives you an early warning of any potential cyberattacks, and allows you to stop trouble in its tracks. The system is targeted specifically for small and medium-sized facilities and for smaller and medium-sized critical infrastructure sites.

Site Radar continuously scans your network looking for threats to your OT systems
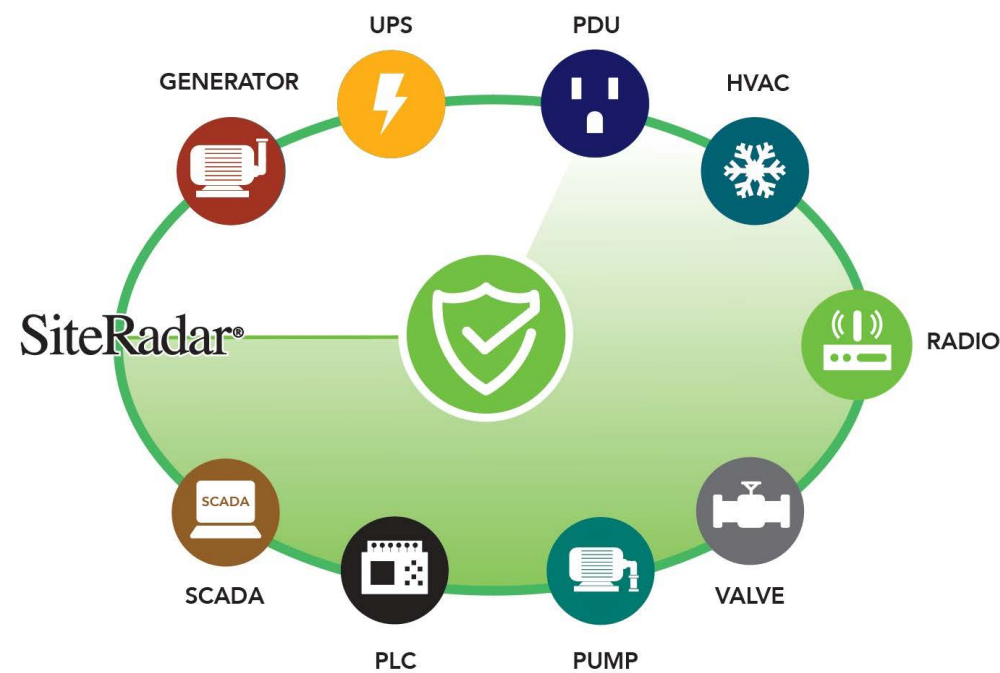

☑ Site Radar® stays on top of the ever changing cyber threat landscape.
Site Radar® is constantly being updated through our secure cloud with the latest threat information from around the world. If a new type of malware is found anywhere in the world, it quickly becomes a part of the thousands of threats that are scanned-for by the system. Site Radar® continuously scans your OT network with this latest threat-profile for any signs of a cyber threat against your operations. This allows you to always you to be on the leading edge against cyber threats.

☑ Site Radar® gives you what you need to stop a potential cyberattack.
When Site Radar® discovers a threat to your systems, it immediately gives you specific responses that you can take to eliminate those threats. The system notifies you of any critical threats but it doesn't overwhelm you. Alerts are sent via e-mail and are clear and concise. The system then prompts you with specific tasks you can take to mitigate and eliminate any potential threat.

☑ Site Radar® provides cybersecurity compliance reports instantly.
Cybersecurity compliance reporting is becoming a part of everyone's operations. Because of this, Site Radar® allows you to print out detailed compliance reports at the touch of one button. These reports include full details of your device inventory, critical threats discovered and mitigation tasks taken in response. The reports print-out in PDF format to allow you to simply print and send the report as-is or, to add any personal commentary as you may wish.
